Regex Practice

To complete this exercise, complete the following steps:

- Clone this repo
- Write some words (one per line) into good.txt and bad.txt. They should have some common/uncommon elements to make the regex more interesting
- Send your good.txt and bad.txt to another student, get new versions from another student
- Run the command `npm test`
- Complete index.js and pass all the tests
- Don't share your solution quite yet, save it (comment it out) and grab a second set of text files
- Repeat!
